Abstract

A very concise summary of the problem addressed and solution presented in this paper.

1 Introduction

Introduce your project topic (start from parallel computing in general and lead to your particular topic). Describe your project goals. Describe what you have achieved in your project. Outline the structure of your paper: In Section 2, we will review the relevant literature. ... Section ?? concludes the paper.

2 Literature Review

Give an overview of the relevant literature. Cite all relevant papers, like [DEL07], [PD07], [DER07], [LDR07], [DLX06], [CDE06], and [DFL06]. Outline for each paper the relevant results in relation to your project. Make sure that you don't just list all relevant papers in random order. Devise a scheme to group papers by subject. The goal of this section is to present to the reader the state-of-the-art in the field selected for your project.
